Creating Auto-Text Entries

Custom auto-text entries can be entered on your BlackBerry® to save time and generate consistent, well-written Work Order History entries and messages with Tenants.

You may want to create auto-text entries for frequently performed tasks such as changing light bulbs or adjusting thermostats. For example, auto-text can be set up so that when you type "**rpibulb**," the message will read "replaced light out with standard bulb."

To Create Custom Auto-Text Entries:

1. Select the ${\bf Options}$ icon from the main menu on your BlackBerry $^{\! \otimes \! }$ device.

2. The Options screen is displayed. Select ${\bf Auto\ Text}$ from the Options menu.

3. The Auto Text screen is displayed. Press the **Menu** key (**EE**) and select **New**.

- 4. Enter the custom auto-text entry under "Replace:". Enter the substituted message under "With:".
- 5. Click the track wheel and select **Save**.

6. The Auto Text entry will now display on the **Auto Text** list.
