

Working Offline

Working Offline:

If your mobile device loses its cellular data or WiFi signal, you can continue to update work orders in your lists; however, until you reacquire a wireless signal, you will not be able to **receive** or **send** updates to your work orders. Once you have a wireless signal again, any updates you have made will be automatically sent.

In situations where both a WiFi and a cellular data signal are available, the cellular data signal is used by default.

While you are working offline, a message will be displayed at the top of the screen indicating that no internet connection is currently available.
