

Mozilla Firefox Settings

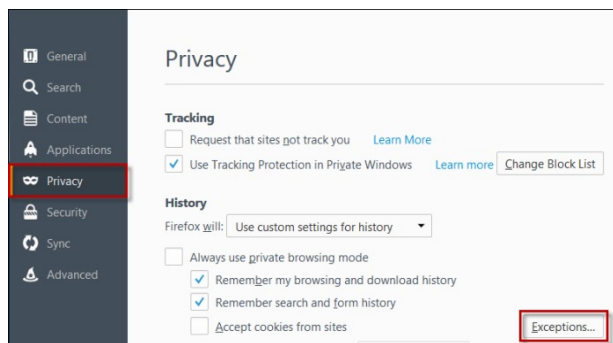

Mozilla Firefox Settings:

In order for the Angus AnyWhere modules to function properly within Axis Portal, pop-ups and cookies must be enabled. If you do not want these features enabled in general, you can create custom pop-up and cookie settings for Angus AnyWhere, as outlined below:

1. In your **Firefox** web browser, click the **Menu** button (☰) and select **Options**.

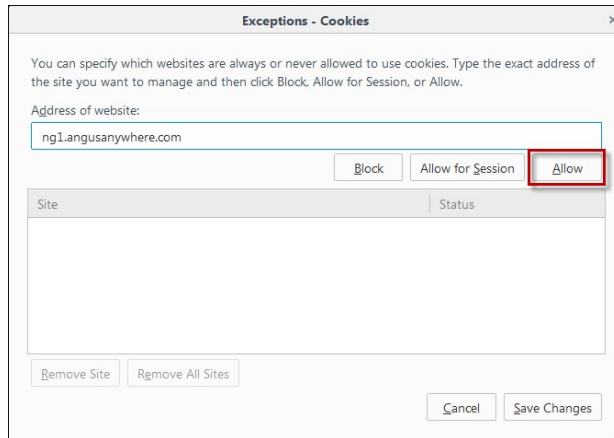

2. In the **Options** tab that opens in your browser, select **Privacy** from the menu on the left. In the **History** section, if **Accept cookies from sites** is not checked, click on the **Exceptions...** button to the right.

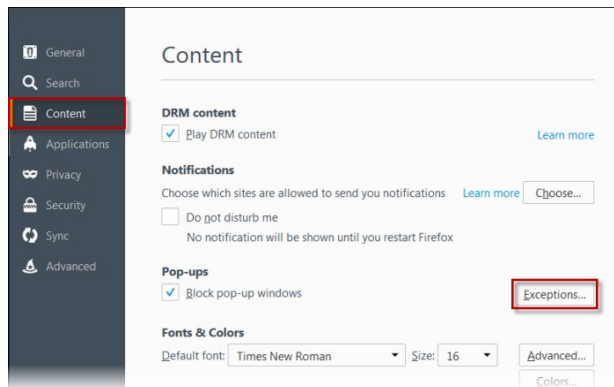

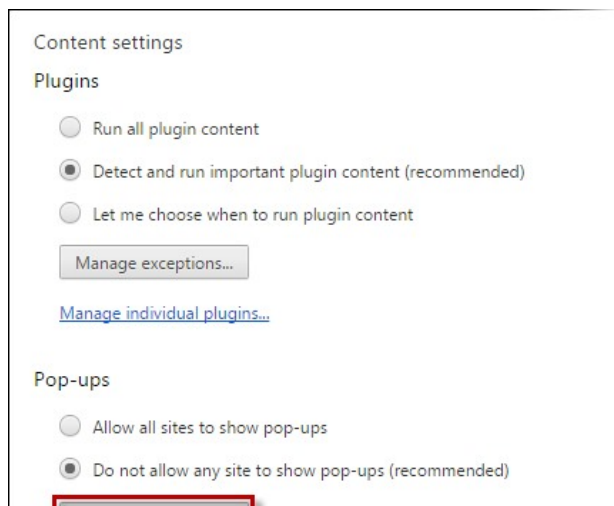

3. In the **Exceptions - Cookies** popup, in the **Address of website** field, enter **ng1.angusanywhere.com**, then click **Allow**.

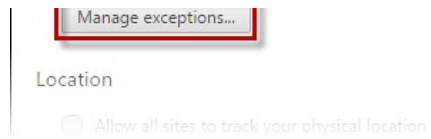

4. Click **Save Changes** to return to the **Options** tab. In the menu on the left, click **Content**. In the content options listed to the right, if **Block pop-up windows** is checked, click the **Exceptions** button to the right.

5. You are returned to the **Content settings** popup. Scroll down to the **Pop-ups** section and click **Manage exceptions**.

6. In the **Pop-up exceptions** popup, enter **ng1.angusanywhere.com** into the **Hostname pattern** field and press the **Enter** key on your keyboard. In the **Behavior** section, make sure that **Allow** is selected, then click **Done**.

7. You are returned to the **Content settings** popup. Click **Done**, and close the **Settings** tab in your browser.
