

Logging In

Logging In:

1. Launch the application. If you do not have the application installed, see [Installation](#) for additional instructions.
2. At the login screen, enter the same username and password which you would normally use to access Axis/Angus AnyWhere.
3. Press **Login** when you are done entering your credentials.

Note:

- After you log in, the application downloads work order lists and other associated information in order to allow it to work in offline mode. Depending on your device and the amount of data which needs to be downloaded (e.g. work orders, employee directories), this may take a few moments.
