

Internet Explorer 11 Settings

Internet Explorer 11 Settings:

Popup Blockers:

Internet Explorer has a popup blocker function, to prevent unwanted windows from opening (usually advertisements); however, some features in Axis Portal require use of popup windows.

When following instructions to complete a task in the Tenant Request module, or any other Angus AnyWhere module, if a described step involving a popup window does not occur as expected, hold down the **Ctrl** (Control) key when clicking on the button or link, which will cause a pop-up window to open. This will override the popup blocker and allow you to complete your task.

Note:

- It may be necessary to continue holding down the **Ctrl** (Control) key until the popup window has completely finished loading.

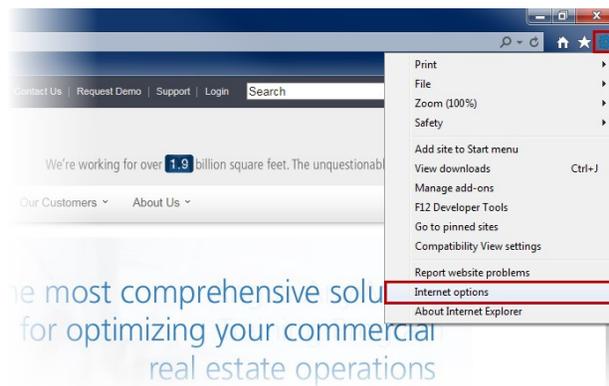

Trusted Sites List:

Internet Explorer Security Settings

In some cases, your Internet Explorer security settings may block you from being able to view pop-ups in Axis Portal. For example, when using Axis Portal through Internet Explorer, if you see a loading screen when trying to access one of the Angus AnyWhere modules, you may need to add Angus AnyWhere as a **Trusted Site**; this will ensure that Internet Explorer's security settings will not interfere with popups.

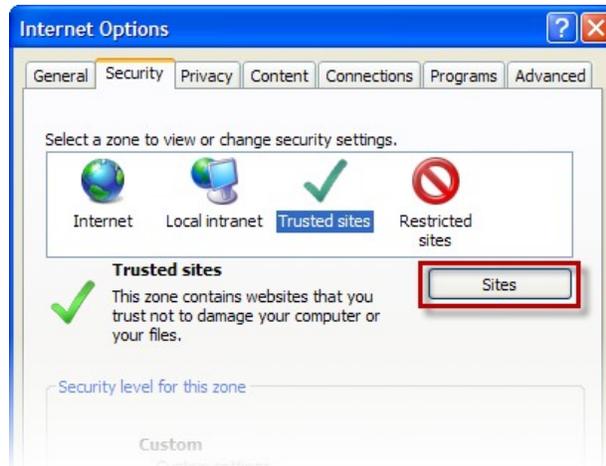

Adding Angus AnyWhere as a Trusted Site

1. Open an **Internet Explorer** browser window.
2. Select **Internet Options** from the **Tools** menu. The **Internet Options** pop-up window is now displayed.

3. Select the **Security** tab.

4. Select **Trusted sites**.
5. Click on **Sites**. The **Trusted sites** window is now displayed.

6. Under **Add this website...**, type **https://*.angusanywhere.com**
7. Place a checkmark beside **Require server verification (https:) for all sites in this zone**.
8. Click on **Add**.

9. Click on **Close**, then click on **OK** on the previous window.
10. Close all browser windows and re-open **Internet Explorer**.
