

Google Chrome Settings

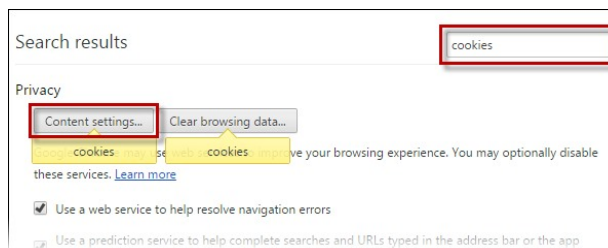

Google Chrome Settings:

In order for the Angus AnyWhere modules to function properly within Axis Portal, pop-ups and cookies must be enabled. If you do not want these features enabled in general, you can create custom pop-up and cookie settings for Angus AnyWhere, as outlined below:

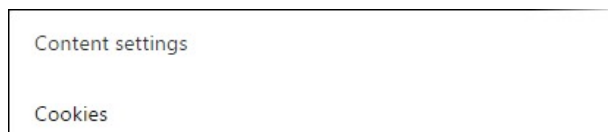

1. In your **Chrome** web browser, click the **Menu** button (☰) and select **Settings**.

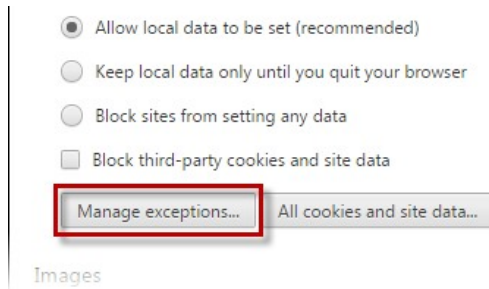

2. In the **Settings** tab that opens in your browser, type "**cookies**" in the search bar (this will filter the settings, so only items related to cookies will be displayed), then click on **Content settings**.

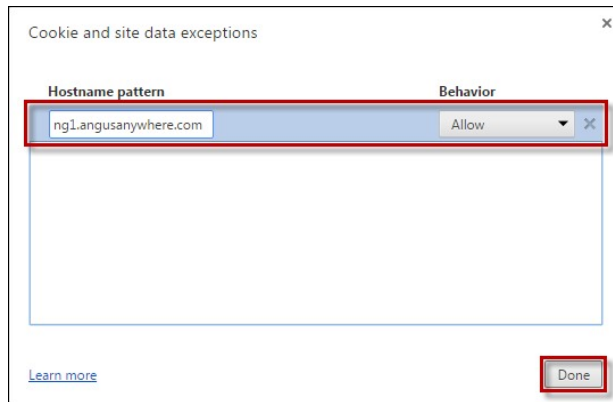

3. In the **Content settings** popup, click **Manage exceptions**.

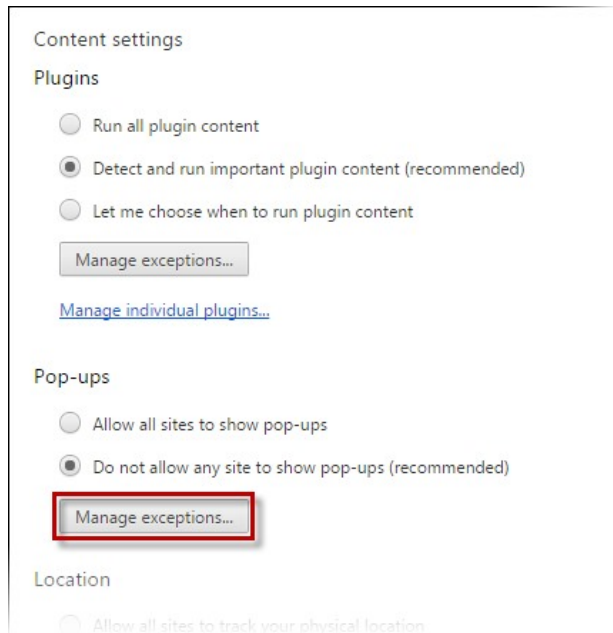

4. In the **Cookie and site data exceptions** popup, enter **ng1.angusanywhere.com** into the **Hostname pattern** field and press the **Enter** key on your keyboard. In the **Behavior** section, make sure that **Allow** is selected, then click **Done**.

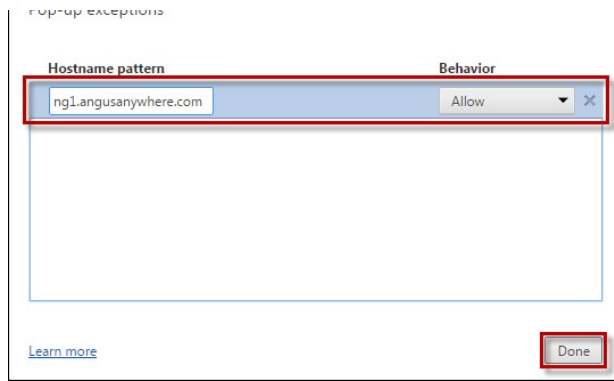

5. You are returned to the **Content settings** popup. Scroll down to the **Pop-ups** section and click **Manage exceptions**.

6. In the **Pop-up exceptions** popup, enter **ng1.angusanywhere.com** into the **Hostname pattern** field and press the **Enter** key on your keyboard. In the **Behavior** section, make sure that **Allow** is selected, then click **Done**.

7. You are returned to the **Content settings** popup. Click **Done**, and close the **Settings** tab in your browser.
