

Angus Work Order Dashboards

Introduction to Dashboards:

To learn how to configure your dashboards, see the [Angus Work Order Dashboards](#) section.

Dashboards bring live updates of important operational data to the front-and-center, allowing you to accurately gauge your organization's performance at a glance.

You can proactively manage your building operations and tenant satisfaction through an easy to use interface that delivers time-based comparisons, trends, services performance and crystal-clear visualizations of compliance.

Within each dashboard you create, you can create multiple custom charts and graphs that are updated automatically, every time you open that dashboard. With drill-down and drill-across capabilities, you can examine specific elements in your data, clarifying what the information represents.

Alternately, your Dashboards can be accessed in the **Control Panel** by clicking [Building Services > Dashboards](#).
